What is VITALCOIN?

A non-custodial algo trading system, based on quantitative research. Your capital stays in your own broker account.

We trade. You keep.

An engineer built it and published its record.

You pick the level and the moment to begin.

VITALCOIN is a technology service. It is an algorithmic trading system. It mirrors its own trades into your account.

You copy our system inside your own account.

Starting, pausing and stopping are your calls.

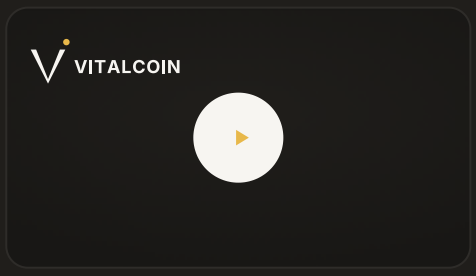

We hold no client money and promise no result.

VITALCOIN operates without a financial services licence. That is because your capital stays in your own account. It stays in your own name, at your own broker.

Can I watch it explained?

Yes. Our explainer video walks you through it in 2 minutes.

Like to read? The 14 answers on this page tell the same story.

Do I send you my capital?

Your money stays in your own account, at your own broker.

The account is in your name, under your password.

We hold one permission: to mirror trades into your account.

You pay us only for credits.

Your broker holds your trading money. You hold the name and the password. We hold the trade permission.

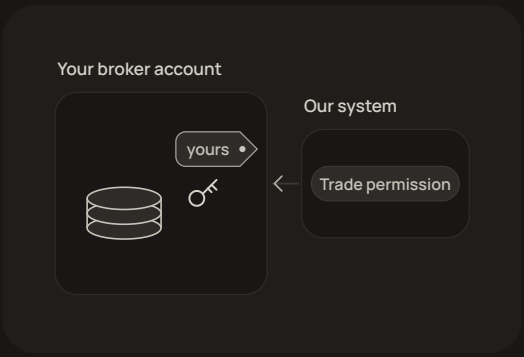

You can remove that permission at any time.

The permission is for trades only.

Our system opens our trades in your account, and closes them.

You add and withdraw money yourself, at your broker.

You can open an account at IC or BlackBull. Both run cTrader.

How does a copy reach me?

Our system trades. Your account follows, matched to your level.

Between two sizes, it always takes the smaller.

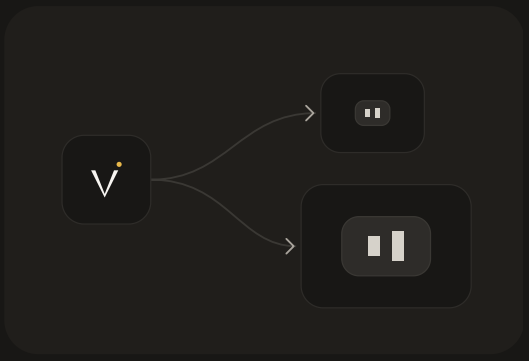

Your own cTrader screen shows every trade as it happens.

The platform times and stamps each one.

Our mirror reads the master account directly. It sizes every trade to your balance and your level.

It travels through cTrader's own connection, as fast as the platform allows.

A small account gets a small copy. A large account gets a large one.

How do I begin?

Start in five steps. The app guides you through each one.

First, sign up with your email and a code.

Your Home page then shows the five steps in order.

Read the record at your own capital first. It is the best ten minutes you will spend here.

1. Verify your identity
2. Open your broker account
3. Connect it
4. Choose your level
5. Buy credits

✓ All set — copying is on.

How bold should I go?

Pick one of four levels. We recommend 2%.

Higher up, every move gets bigger, both ways.

Change it any time, from your dashboard.

Each level has its own floor.

A floor is the smallest account where every trade in the record fits.

The floors are 1%: $10,000; 2%: $5,000; 3%: $3,400; 5%: $2,000.

Each account runs up to $150,000. Above that, your dashboard helps you open a second one.

The dashboard shows that level in the record before you confirm.

What does it cost?

You pay only on new money in your account.

Getting back to your best is always free.

Say your $10,000 moves to $9,500, then back to $10,000. Our share is $0.

Monthly fee: $0.

Your best is the highest balance your account has reached.

Only money above it is new.

When a winning trade ends above your best, our share applies to the part above.

Our share starts at 50% and eases to 30% from $100,000.

The bigger your account, the smaller our share.

We may earn a commission if you open your broker account through our links. Your trading costs stay the same.

What are credits?

They're how you pay us. Our share comes out of them.

Buy them in crypto, from $100.

Copying begins once they reach 10% of the balance you trade with.

Each purchase is prepaid and non-refundable.

We take USDT and USDC.

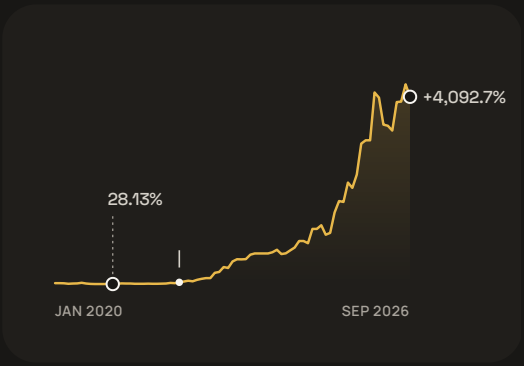

Add more any time, even before you connect your account.

Your dashboard shows exactly the amount you bought.

Credits have no end date.

What does the record show?

The 7 Year Backtest made 4,092.7% at 5%, our stress test level.

Its deepest dip was 28.13%. It recovered and went on.

It is a backtest: an example, not a forecast.

The record runs January 2020 – September 2026, almost 7 years.

It uses IC raw tick data, with commissions included.

Every figure is a percent, before our share.

Each one is worked out from the trade rows when the record is published. Nobody types them.

The figure at the top is Compound: profit stays in.

Take profit, where you withdraw freely, made 423.4% at 5%.

You can watch the backtest videos at each level. They are unedited.

Your own fills, your timing and your balance will write their own version of the story.

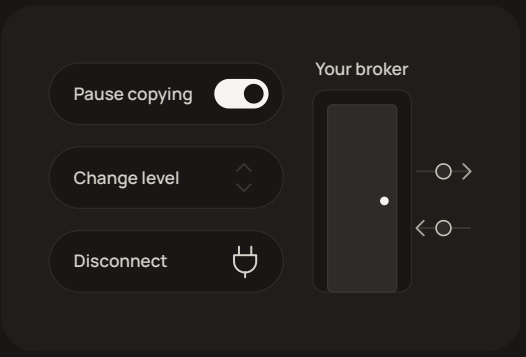

Can I stop when I want?

You stay in control. One press pauses copying.

Open trades stay with you at your broker, where you manage them.

Add or withdraw money whenever you choose.

You can disconnect, and come back any time.

Yes, any time, from your dashboard.

Changing level is just as simple.

Press Disconnect and copying stops. Your account is unlinked.

Credits are kept for this account; connect it again any time.

You can also remove the trade permission yourself, at any time.

Who is behind it?

Engr. Jawwad Sadiq, engineer and founder.

He built VITALCOIN and answers for every version.

Each version is re-tested and improved under an engineer's eye — Engine V2 is where that work stands today.

Our next engine, V3, is in research now. It launches only once it beats the current record.

VITALCOIN is an institutional-grade algo trading system, built on quantitative data analysis by Engr. Jawwad Sadiq, our founder.

It was designed and developed at SKILL ALFA TECHNOLOGIES.

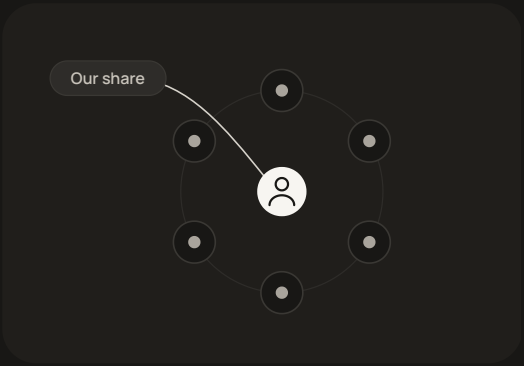

Optional

Bring clients. Earn as they grow.

You are paid from our share of their new money.

Tell a friend only if you want to.

Your invite link works from day one.

We pay affiliates from our own share, when a client in their chain buys credits. A sign-up alone earns $0.

The chain runs 15 levels: 10 · 5 · 3 · then 1% for twelve more. Together they take 30% of our share.

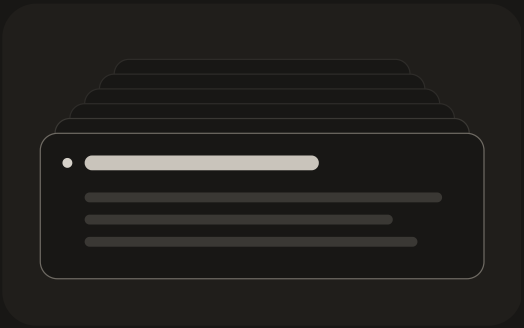

Payment lands as soon as a client's credits are purchased.

You earn for as long as the people you introduced keep trading.

Real affiliates are real users.

What else do people ask?

Six more answers, straight from our FAQ.

Is the affiliate programme MLM?

It pays on 15 levels, so here is the plain difference.

A recruiting scheme pays for sign-ups. We pay affiliates from our own share, when a client in their chain buys credits. A sign-up alone earns $0.

To stay active, your own trading account at your broker needs three things.

You added $1,000 or more and left it in. Copying is on. The account holds at least $250.

Credits sit outside this count. Real affiliates are real users. Every rate is in the Affiliate rules.

Where can I join from?

Anywhere your local law allows it. We serve clients online, worldwide. Where the law requires it, we may decline a connection.

You need to be 18 or over. You also need credits and an account at a broker that runs cTrader.

How quickly can my account grow?

Think in years, the way serious capital does. This system rewards a plan over a hurry.

Put your own capital into the calculator. It shows what six years of the record would have made for you. It is a backtest: an example, not a forecast.

Compounding does its best work over years.

Should I keep the profit in, or take it out?

Both are your choice, and the record shows both.

Compound: profit stays in, so later trades work with a bigger balance. **Take profit**: you withdraw freely, and your capital keeps its size.

Open the calculator and switch between them on your own capital. Pick what fits your plan.

When does my first copy come?

When our system trades next. It picks its own moments, so quiet spells are normal.

Once your account is connected, your copy follows it.

Why 5% if you recommend 2%?

Because we show the most demanding version first.

5% is our stress test, published in full. 2% is the level we recommend for a steadier ride.

The record shows both, at your own capital. Choose with your eyes open.

Can I take it with me?

Yes. Save this page as a PDF and share it.

Send it to anyone who asks how it works.
